

# Social Network Analysis

**Drupal**

**Project website:** <http://sna.drupaler.net>

# Mathematical background

- Graphs and social networks
- **Graph:** a graph is a set of objects called points or vertices connected by links called lines or edges
- points = users
- edges = interactivity between users

# Interactivity between users

Nodes and replies

- Buddy module
- Viewing user's personal page

The SNA module can easily extended to use whatever interactivity to generate the network

# Operations in the network

- Searching shortest route
- Searching minimal step route
- Compute clustering coefficient for users
- Determine average step separation for the website (collect the whole world into one Drupal website and check the famous six steps separation theory :))
- Etc.

The mentors of the project:

- Károly Négyesi (chx)
- Thomas Narres

A Google Summer of Code sponsored module
