Unit test automation

Rok Žlender

What is it for?

- Automatical testing of a patch
  - If patch applies
  - If patch passes simpletest tests

How it works?

1. Developer submits a patch
2. New drupal site is installed
3. Patch is applied
4. Tests are run

DEMO

Benefits

- Every patch is partly tested
- All tests are run every time

Future

- Expand the number of tests
- Use automatic testing on drupal.org
