

Entity Formatter Cheat Sheet

All Field Types

- `value()` → array|string
- `values()` → array
- `isDeltaValid([int delta])` → bool
- `isAccessible()` → bool
- `count()` // Countable interface
- `getIterator()` // IteratorAggregate interface
- `setDelta(int)`

Text

- `text()`
- `summary([int length])`
- `truncate([int length])`
- `setTruncate(int)`

Image

- `img()`
- `src()`
- `alt()`
- `title()`
- `setImageStyle(string)`

File

- `url()`
- `link()`
- `name()`
- `description()`
- `filesize()`

Date

- `formatted(bool useEnddate) → string`
- `customFormatted(bool useEnddate) → string`
- `duration → string`
- `date() → timestamp`
- `enddate() → timestamp`
- `hasEnddate() → bool`
- `setFormat()`
- `setCustomFormat()`

Entity Reference

- `render()`
- `linkedLabel()`
- `label()`
- `link()`
- `url()`
- `path()`
- `getFormatter() → EfEntityFormatter`
- `setViewMode(string)`

Examples

Print the first value

```
<?php print $page->getImages()->setImageStyle('thumbnail')->img(); ?>
```

Print the first value (if present) with label

```
<?php if ($page->getImages()->isDeltaValid()) : ?>
  <label><?php print t('Images') . ':'; ?></label>
  <div class="images"><?php print $page->getImages()->img(); ?></div>
<?php endif; ?>
```

Print all values

```
<?php foreach ($page->getImages() as $image) {
  print $image->setImageStyle('thumbnail')->img();
} ?>
```

Print the third value

```
<?php if ($page->getImages()->isDeltaValid(3)) {
  print $page->getImages()->setDelta(3)->img();
} ?>
```

Print first until third value (if present)

```
<?php
$num_to_print = min(3, count($page->getImages()));
for ($delta = 0; $delta < $num_to_print; $delta++) {
  print $page->getImages()->setDelta($delta)->img();
} ?>
```
