Testing Notes for Node Limit Project 7.x-1.0-alpha3
Summary Results and Comments for Node Limit User Module
20-January-2012, Doug Ashley (Dougsap)

The modules in this project can support a variety of use cases.

It is important to analyze (and test) the interrelationships of the Node Limit restrictions, user roles, and permissions prior to use.
Simple restrictions are relatively easy to analyze and test, more complex ones become more difficult.
Restrictions using logic from more than one modules could be difficult to understand and test.
Users for restriction rules cannot be specified with wildcards (and there are probably good reasons for this).
The number (and roles) of users and number (and uses) of Content Types will probably impact how a site would use these modules.

These modules are very flexible. They probably support a wide range of anticipated and unanticipated uses.
In a limited time frame, it is not possible to test every possible combination of restrictions, permissions, possible requirements etc.
I have only become interested in this module recently and am not an expert on the design, features, etc.

Summary:
The 'Node Limit User' logic seems to work well with a single specified user and a complementary catch-all rule.

					Sample Results	
					User	<u>Entry Count</u>
Set-up A	Limit	7	This set-up works well.		User1	7
	Content Type	CT2	It allows User1 to create 7 nodes of Content Type CT2.		Admin	Unlimited
	User	User1	It does not allow creation of CT2 nodes by other users.		Others	None
	Users of Role	<blank>				
	Limit	0	Subjective comment: This Set-up (A) might be useful on a small site with a super-user,			
	Content Type	CT2	who is not an Administrator, but still needs to maintain some limited restricted content.			
	User	<blank>				
	Users of Role	Authenticated				
	Permissions	Allow Maintenance of CT by Authenticated Users				
Set-up B	Limit	7			Admin	Unlimited
	Content Type	CT2			User1	7
	User	User1			User2	8
	Users of Role	<blank>			Others	10
	Limit	8				
	Content Type	CT2				
	User	**User2**				
	Users of Role	<blank>				
	Limit	10				
	Content Type	CT2				
	User	<blank>				
	Users of Role	Authenticated				
	Permissions	Allow Maintenance of CT by Authenticated Users				
Set-up C	Limit	7	Only admin can create CT2 nodes		Admin	Unlimited
	Content Type	CT2			User1	None
	User	User1			User2	None
	Users of Role	<blank>			Others	None
	Limit	8	Subjective comment: This Set-up ('C') would seem to be of very limited usefulness.			
	Content Type	CT2	There would seem to be no reason to configure this Set-up.			
	User	**User2**	It seems like the module logic is testing for two mutually exclusive conditions with 'AND'			
	Users of Role	<blank>	(e.g., If user is USER1 <u>AND</u> user is USER2)			
	Limit	0				
	Content Type	CT2				
	User	<blank>				
	Users of Role	Authenticated				
	Permissions	Allow Maintenance of CT by Authenticated Users				
Set-up D	Limit	7			Admin	Unlimited
	Content Type	CT2			User1	7
	User	User1			User2	8
	Users of Role	<blank>			Others	Unlimited
			Subjective comment: This Set-up would seem to be of very limited usefulness.			
	Limit	8				
	Content Type	CT2				
	User	**User2**				
	Users of Role	<blank>				
	Permissions	Allow Maintenance of CT by Authenticated Users				
Other Set-ups	The above Step-ups are not comprehensive, but rather, to simply illustrate some ways of using the 'Node Limit User' Module
