

GUIDELINES

Permissions:

User other than "administrator" role needs permission to access simple node importer page, by default site admin has the access.

Troubleshooting:

If user has access to the Simple Node Importer page but not able to see any field or the "Select Entity Type" field is empty, no worries just ask your admin to allow entity type for importing content from "Simple Node Import Settings" page.

Requirements:

- Knowledge of the Bundle fields for which user is importing content.
- CSV with valid data.
- Skills to map the CSV columns to desired field.

How to Use:

- Go to the Simple Node Importer add page (/node/add/simple_node).
- Select Entity Type for which user wants to import content.
- Options are:
 - Node
 - User
 - Taxonomy
- If "Node" as entity type is selected, then user needs to select bundle type from the field "Select Content Type".
- If "User" or "Taxonomy" as entity type is selected, then user just need to upload the CSV.
- On selection of desired entity and content type(in case of "node" entity), an information box appears mentioning required and multi-valued fields.
- End-user can download a sample CSV form "Download Sample CSV" which downloads a sample CSV file containing all the fields depending upon your entity selection.
- End-user can choose to upload own CSV or downloaded sample CSV by copying data into this CSV.
- After CSV upload, click on "Submit" button, user will redirected to the Flexible mapping UI screen (For "Node" & "Users" entity type only).

- On Flexible Mapping UI, End-user need to map the CSV column to its corresponding fields, it is an important step so please verify once more before clicking on Submit Button.
- After submit on Mapping UI, you are redirected to confirmation page which will be the last step to discard the import process.
- After import process is done, you will be redirected to the home page with the Import Status.
- If any record fails to import then you will review those rows in "Resolution Center" (/nodeimporter/resolution-center)
- Resolution Center:
 - You can download CSV for the failed records by clicking on "Download CSV" link.
 - You can view all the failed rows from a specific import by clicking on "View" link.
 - After clicked on "View" link, you can edit and save specific record by clicking on "Edit & Save" link.
