

## Done.20100304 (an attempt to upgrade from 6.10 to 6.16)

- Increased PHP memory limit 16M → 64M (php.ini in cgi-bin)
- Backup DB
- Backup scripts
- Backup sites
- Backup files
- Backup .htaccess
- Try to upgrade to 6.16
  - Download 6.16
  - Modify .htaccess in root 6.16 according to .htaccess in 6.10 backup
  - Copy setting.php (6.10) to sites/default (6.16) and modify it according to default.settings.php (6.16)
  - Copy sites/all/modules from 6.10 to 6.16; I have only 2 modules
    - backup\_migrate
    - menu\_toggle
  - Read the whole upgrade.txt document
  -
- Drupal site Off line
- Disable Backup & Migrate
- menu\_toggle was disabled
- Remove all Drupal files and directories (compare with the new 6.16 set)
  - Sites was not removed
    - 755 → 777
    - Default was not removed
      - 555 → 777
      - Settings.php
        - 555 → 777
  - Sites removed
- Copy 6.16 from local to server

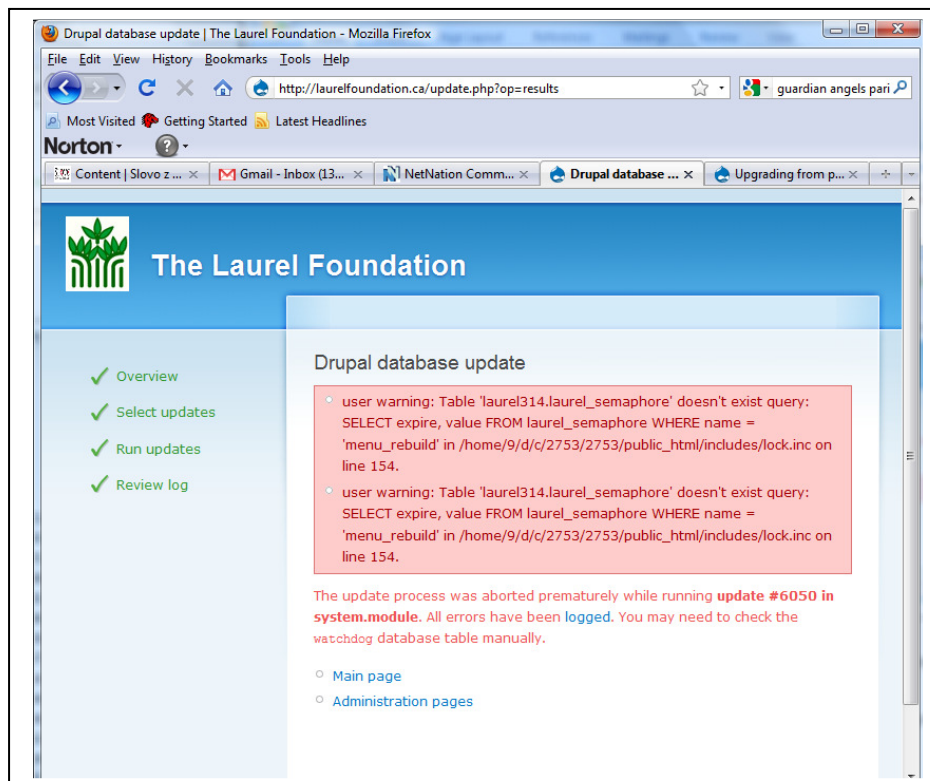

- 
- Run update.php
  - 4 steps shown – Continue
  - The following screen:

○ Click Update

- An unrecoverable error has occurred. You can find the error message below. It is advised to copy it to the clipboard for reference. Please continue to [the error page](#)
- An HTTP error 0 occurred. <http://www.laurelfoundation.ca/update.php?id=3&op=do>

- user warning: Table 'laurel314.laurel\_semaphore' doesn't exist query: SELECT expire, value FROM laurel\_semaphore WHERE name = 'menu\_rebuild' in /home/9/d/c/2753/2753/public\_html/includes/lock.inc on line 154.
- user warning: Table 'laurel314.laurel\_semaphore' doesn't exist query: SELECT expire, value FROM laurel\_semaphore WHERE name = 'menu\_rebuild' in /home/9/d/c/2753/2753/public\_html/includes/lock.inc on line 154.

The update process was aborted prematurely while running **update #6050 in system.module**. All errors have been [logged](#). You may need to check the `watchdog` database table manually.
