Code review (submitted options)

[Select](#) | [Default](#) | [Active](#) | [Core](#) | [All](#) | [Files](#) | [Patches](#) | [Settings](#) |

Coder found 1 projects, 8 files, 0 warnings were flagged to be ignored

Coder provides helpful hints trying to minimize false positives, but offers no guarantees. You are the final arbitrator. If in doubt, please read the Drupal documentation (see review links below and api.drupal.org).

Use the Selection form to select options for this code review, or change the [Default Settings](#) and use the [Default](#) tab above.

[Selection form](#)[Reviews](#)

- [Converting 4.6.x modules to 4.7.x](#)
- [Converting 4.7.x modules to 5.x](#)
- [Converting 5.x modules to 6.x](#)
- [Converting 6.x modules to 7.x](#)
- [Converting 7.x modules to 8.x](#)
- [Drupal CodeSniffer](#) (Optional; Checks for PHP Coder_Sniffer rules.)
- [Drupal Coding Standards](#) (Checks for Drupal coding standards. Every developer should use this.)
- [Drupal Commenting Standards](#) (Checks for the Drupal commenting standards; every developer should use this.)
- [Drupal SQL Standards](#) (Checks for SQL strings inside db_query, since the change to DBTNG, this is less useful.)
- [Drupal Security Checks](#) (Checks for security issues. This is a very basic security check. It errs on the side of caution so may give false positives.)
- [Drupal!Art Coding Style](#) (Optional; Checks for coding style suggested by the author.)
- [Internationalization](#)
- [Release standards](#) (Prepare modules for production by removing debugging function calls.)
- [Translation files](#) (Checks for .po translation issues, this is somewhat experimental)

apply the checked coding reviews

- minor (most)
- normal
- critical (fewest)

show warnings at or above the severity warning level

- [handle code ignores](#)

Coder is a helpful assistant, not a Drill Sergeant. Since the developer should always know better than Coder, the [Coder @ignore system](#) allows developers to tell coder to ignore certain warnings. Uncheck this field to see all warnings, even those that are ignored.

[What to review](#)

- active modules and themes
- core files (php, modules, and includes)
- include files (inc | php | install | test)

[Include file exclusions](#)

[Select specific modules](#)
