

I have forgotten my Drupal password and so clicked the “Reset Password” button. It sent me a hyperlink in my email that brings up this page:

It then asks me to change my password which takes me to the following page:

A screenshot of the Drupal user profile page for the user "dvlasich". The page has a blue header with navigation links: "Drupal Homepage", "Your Dashboard", "Logged in as *dvlasich*", and "Log out". Below the header, there are tabs for "Dashboard", "Your Posts", "Your Commits", "Your Issues", "Your Projects", and "Profile". The "Profile" tab is selected. Below the tabs, there are links for "View", "Edit", "Notifications", and "SSH keys". The "Edit" link is highlighted. Below this, there are links for "Account", "Git access", "My newsletters", and "E-mail addresses". The "Account" link is highlighted. The main content area shows the "Username" field with the value "dvlasich". Below this, there is a note: "Spaces are allowed; punctuation is not allowed except for periods, hyphens, apostrophes, and underscores." The "Current password" field is empty. A blue arrow points to this field with the text "If I knew my password, I wouldn't be here!". Below this, there is a note: "Enter your current password to change the E-mail address." The "E-mail address" field has the value "dvlasich@fontana.org". Below this, there is a note: "E-mail addresses are managed on the [E-mail addresses](#) tab." The "Password" field is empty. To the right of this field, there is a "Password strength:" indicator. The "Confirm password" field is empty. At the bottom, there is a note: "To change the current user password, enter the new password in both fields."

Note that it thinks I'm already logged in. I tried entering a new password, but it says to enter my old password first. If I knew my password, I wouldn't need to reset it. This makes no sense. I tried the "Send me a new password" link and it takes me back to this page again.
