Modules [List](#) [Uninstall](#)

Modules are plugins that extend Drupal's core functionality. Enable modules by selecting the *Enabled* checkboxes below and clicking the *Save configuration* button. Once a module is enabled, new [permissions](#) may be available. To reduce server load, modules with their *Throttle* checkbox selected are temporarily disabled when your site becomes extremely busy. (Note that the *Throttle* checkbox is only available if the Throttle module is enabled.)

It is important that [update.php](#) is run every time a module is updated to a newer version.

You can find all administration tasks belonging to a particular module on the [administration by module page](#).

To extend the functionality of your site, a number of [contributed modules](#) are available.

See the [available updates](#) page for information on installed modules and themes with new versions released.
