BUG TESTING

Description: https://www.drupal.org/node/2821240
Bug: https://www.drupal.org/node/2724423

SCENARIO 1

Drupal version: 8.2.6 (Fresh Drupal installation).
ECK Version: 8.x-1.0-alpha3 (https://ftp.drupal.org/files/projects/eck-8.x-1.0-alpha3.tar.gz)
Display Suite version: 8.2.6 (https://ftp.drupal.org/files/projects/ds-8.x-2.6.tar.gz)
Layout plugin version: 8.x-1.0-alpha23 (https://ftp.drupal.org/files/projects/layout_plugin-8.x-1.0-alpha23.tar.gz)

ECK installation without issues. DS installation requires contributed module "*Layout plugin*". Installation successful.
Followed teps
1. Go to */admin/structure/eck/entity_type*, and added a new entity "*Row*", with a bundle "default".
2. Add a textfield "*field_test*" to the previous bundle.
3. Go to */admin/structure/display-modes/view* and add a view mode "*Test*" (machine name: row.*test*) for our entity "*Row*".
4. Go to */admin/structure/eck/entity/row/types/manage/default/display* and enable custom display settings for "*Test*" view mode. Then, go to */admin/structure/eck/entity/row/types/manage/default/display/test*. Enable the default DS layout "*One column layout*". Drag/append only "*field_test*" and "*title*". Save this configuration.
5. Create a view of "*Row*". The view should display "*Row*". For "*View mode*", choose "*Test*" (our previously created view mode). Save view, and go to the display.
6. Result: ECK entity displayed using the custom created view mode.

NOTES:
*There is not a way to access to the new view mode at /admin/structure/eck/entity/row/types/manage/default/display. No tab available for that purpose. Needs to be accesed editing the URL:*

- Going to */admin/structure/eck/entity/row/types/manage/default/display*:

- Going to */admin/structure/eck/entity/row/types/manage/default/display/test*:

Previous absence of those tabs does not affect the right visualization of view modes.

RESULT: Works as designed.

SCENARIO 2

Drupal version: 8.3.1 (Fresh Drupal installation).
ECK Version: 8.x-1.0-alpha3 (https://ftp.drupal.org/files/projects/eck-8.x-1.0-alpha3.tar.gz)
Display Suite version: 8.x-3.0-beta3 (https://ftp.drupal.org/files/projects/ds-8.x-3.0-beta3.tar.gz)

ECK installation without issues. DS installation now requires core module (experimental) "*Layout discovery*". Installation successful.

Followed teps
1. Go to */admin/structure/eck/entity_type*, and added a new entity "*Row*", with a bundle "default".
2. Add a textfield "*field_test*" to the previous bundle.
3. Go to */admin/structure/display-modes/view* and add a view mode "*Test*" (machine name: row.*test*) for our entity "*Row*".
4. Go to */admin/structure/eck/entity/row/types/manage/default/display* and enable custom display settings for "Test" view mode. Then, go to */admin/structure/eck/entity/row/types/manage/default/display/test*. Enable the default DS layout "*One column layout*". Drag/append only "*field_test*" and "*title*". Save this configuration.
5. Create a view of "*Row*". The view should display "*Row*". For "*View mode*", choose "*Test*" (our previously created view mode). Save view, and go to the display.
6. Result: ECK entity displayed using the custom created view mode.

NOTES:
There is not a way to access to the new view mode at /admin/structure/eck/entity/row/types/manage/default/display. No tab available for that purpose. Needs to be accesed editing the URL:

- Going to */admin/structure/eck/entity/row/types/manage/default/display*:

Manage display ☆

Manage fields	Manage form display	Manage display

Home » Administration » Structure » *Row* content » *Row* bundles » Edit *Row* bundle

- Going to */admin/structure/eck/entity/row/types/manage/default/display/test*:

Manage display ☆

Manage fields	Manage form display	Manage display

Default   Test

Previous absence of those tabs does not affect the right visualization of view modes.

RESULT: Works as designed.
