Tests

Select the tests you would like to run, and click Run tests.

<input type="checkbox"/>	Test	Description
<input checked="" type="checkbox"/>	Aggregator	
<input checked="" type="checkbox"/>	Add feed functionality	Add feed test.
<input checked="" type="checkbox"/>	Update feed functionality	Update feed test.
<input checked="" type="checkbox"/>	Remove feed	Remove feed test.

	functionality	
	Update feed item functionality	Update feed items from a feed.
	Remove feed item functionality	Remove feed items from a feed.
	Categorize feed item functionality	Test feed item categorization.
	Import feeds from OPML functionality	Test OPML import.
	▼ Block	
	Block functionality	Add, edit and delete custom block. Configure and move a module-defined block.
	Non default theme admin	Check the administer page for non default theme.
	▼ Blog	
	Blog functionality	Create, view, edit, delete, and change blog entries and verify its consistency in the database.
	▼ Blog API	
	Blog API functionality	Create, edit, and delete post; upload file; and set/get categories.
	▼ Book	
	Book functionality	Create a book, add pages, and test book interface.
	Block availability	Check if the book navigation block is available.
	▼ Bootstrap	
	IP address and HTTP_HOST test	Get the IP address from the current visitor from the server variables, check hostname validation.
	Page cache test	Enable the page cache and test it with conditional HTTP requests.
	Variable test	Make sure the variable system functions correctly.
	Boot and exit hook invocation	Test that hook_boot() and hook_exit() are called correctly.
	▼ Cache	
	Cache saving test	Check our variables are saved and restored the right way.
	Cache clear test	Check our clearing is done the proper way.
	▼ Comment	
	Comment interface	Test comment user interfaces.
	Comment on a node page	Test comment form on a node page.
	Anonymous comments	Test anonymous comments.
	Comment approval	Test comment approval functionality.

<input checked="" type="checkbox"/>	Block availability	Check if the recent comments block is available.
<input checked="" type="checkbox"/>	▼ Contact	
<input checked="" type="checkbox"/>	Site-wide contact form	Tests site-wide contact form functionality.
<input checked="" type="checkbox"/>	Personal contact form	Tests personal contact form functionality.
<input checked="" type="checkbox"/>	▼ Database	
<input checked="" type="checkbox"/>	Connection tests	Tests of the core database system.
<input checked="" type="checkbox"/>	Fetch tests	Test the Database system's various fetch capabilities.
<input checked="" type="checkbox"/>	Fetch tests, part 2	Test the Database system's various fetch capabilities.
<input checked="" type="checkbox"/>	Insert tests	Test the Insert query builder.
<input checked="" type="checkbox"/>	Insert tests, LOB fields	Test the Insert query builder with LOB fields.
<input checked="" type="checkbox"/>	Insert tests, default fields	Test the Insert query builder with default values.
<input checked="" type="checkbox"/>	Update tests	Test the Update query builder.
<input checked="" type="checkbox"/>	Update tests, Complex	Test the Update query builder, complex queries.
<input checked="" type="checkbox"/>	Update tests, LOB	Test the Update query builder with LOB fields.
<input checked="" type="checkbox"/>	Delete tests	Test the Delete query builder.
<input checked="" type="checkbox"/>	Merge tests	Test the Merge query builder.
<input checked="" type="checkbox"/>	Select tests	Test the Select query builder.
<input checked="" type="checkbox"/>	Select tests, subqueries	Test the Select query builder.
<input checked="" type="checkbox"/>	Select tests, ordered	Test the Select query builder.
<input checked="" type="checkbox"/>	Select tests, complex	Test the Select query builder with more complex queries.
<input checked="" type="checkbox"/>	Query tagging tests	Test the tagging capabilities of the Select builder.
<input checked="" type="checkbox"/>	Query altering tests	Test the hook_query_alter capabilities of the Select builder.
<input checked="" type="checkbox"/>	Query altering tests, part 2	Test the hook_query_alter capabilities of the Select builder.
<input checked="" type="checkbox"/>	Regression tests	Regression tests cases for the database layer.
<input checked="" type="checkbox"/>	Query logging	Test the query logging facility.
<input checked="" type="checkbox"/>	Range query test	Test the Range query functionality.
<input checked="" type="checkbox"/>	Temporary query test	Test the temporary query functionality.
<input checked="" type="checkbox"/>	ANSI SQL syntax tests	Test ANSI SQL syntax interpretation.

	SQL handling tests	Test handling of invalid data.
	Custom query syntax tests	Test Drupal's extended prepared statement syntax..
	Transaction tests	Test the transaction abstraction system.
	Schema API	Tests table creation and modification via the schema API.
	▼ DBLog	
	DBLog functionality	Generate events and verify dblog entries; verify user access to log reports based on permissions.
	▼ Field	
	Field Attach tests	Test Field Attach API functions.
	Field info tests	Get information about existing fields, instances and bundles.
	Field tests	Create / read /update a field.
	Field instance tests	Create field entities by attaching fields to entities.
	Per-bundle Storage tests	Test Per-bundle Storage module.
	Text Field	Test the creation of text fields.
	▼ File	
	File space used tests	Tests the file_space_used() function.
	File validator tests	Tests the functions used to validate uploaded files.
	Unmanaged file save data	Tests the unmanaged file save data function.
	File uploading	Tests the file uploading functions.
	File paths and directories	Tests operations dealing with directories.
	File scan directory	Tests the file_scan_directory() function.
	Unmanaged file delete	Tests the unmanaged file delete function.
	Unmanaged file moving	Tests the unmanaged file move function.
	Unmanaged file copying	Tests the unmanaged file copy function.
	File delete	Tests the file delete function.
	File moving	Tests the file move function.
	File copying	Tests the file copy function.
	File loading	Tests the file_load() function.
	File saving	Tests the file_save() function.
	File validate	Tests the file_validate() function.

<input checked="" type="checkbox"/>	File save data	Tests the file save data function.
<input checked="" type="checkbox"/>	File download	Tests for file download/transfer functions.
<input checked="" type="checkbox"/>	File naming	Test filename munging and unmunging.
<input checked="" type="checkbox"/>	▼ Filter	
<input checked="" type="checkbox"/>	Filter administration functionality	Thoroughly test the administrative interface of the filter module.
<input checked="" type="checkbox"/>	Core filters	Filter each filter individually: Convert URLs into links, Convert line breaks, Correct broken HTML, Escape all HTML, Limit allowed HTML tags.
<input checked="" type="checkbox"/>	▼ Form API	
<input checked="" type="checkbox"/>	Required field validation	Carriage returns, tabs, and spaces are not valid content for a required field.
<input checked="" type="checkbox"/>	Form type-specific tests	Test form type functions for expected behavior.
<input checked="" type="checkbox"/>	▼ Forum	
<input checked="" type="checkbox"/>	Forum functionality	Create, view, edit, delete, and change forum entries and verify its consistency in the database.
<input checked="" type="checkbox"/>	▼ Help	
<input checked="" type="checkbox"/>	Help functionality	Verify help display and user access to help based on permissions.
<input checked="" type="checkbox"/>	▼ Locale	
<input checked="" type="checkbox"/>	String translate and validate	Adds a new locale and translates its name. Checks the validation of translation strings.
<input checked="" type="checkbox"/>	Translation import	Tests the importation of locale files.
<input checked="" type="checkbox"/>	Language switching	Tests for the language switching feature.
<input type="checkbox"/>	► Materialized View	
<input checked="" type="checkbox"/>	▼ Menu	
<input checked="" type="checkbox"/>	Menu item creation/deletion	Add a custom menu, add menu items to the custom menu and Navigation menu, check their data, and delete them using the menu module UI.
<input checked="" type="checkbox"/>	Hook menu tests	Test menu hook functionality.
<input checked="" type="checkbox"/>	Menu rebuild test	Test rebuilding of menu.
<input checked="" type="checkbox"/>	▼ Module	
<input checked="" type="checkbox"/>	Module API	Test low-level module functions.
<input checked="" type="checkbox"/>	Enable/disable modules	Enable/disable core module and confirm table creation/deletion.
<input checked="" type="checkbox"/>	Module dependencies	Enable module without dependency enabled.
<input checked="" type="checkbox"/>	Required modules	Attempt disabling of required modules.
<input checked="" type="checkbox"/>	▼ Node	

<input checked="" type="checkbox"/>	Load multiple nodes	Test the loading of multiple nodes.
<input checked="" type="checkbox"/>	Node revisions	Create a node with revisions and test viewing, reverting, and deleting revisions.
<input checked="" type="checkbox"/>	Node teaser	Test node_teaser() with different strings and lengths.
<input checked="" type="checkbox"/>	Node edit	Create a node and test node edit functionality.
<input checked="" type="checkbox"/>	Node preview	Test node preview functionality.
<input checked="" type="checkbox"/>	Node creation	Create a node and test saving it.
<input checked="" type="checkbox"/>	Node edit permissions	Create a node and test edit permissions.
<input checked="" type="checkbox"/>	Node title XSS filtering	Create a node with dangerous tags in its title and test that they are escaped.
<input checked="" type="checkbox"/>	Block availability	Check if the syndicate block is available.
<input checked="" type="checkbox"/>	Node post information display	Check that the post information (submitted by Username on date) text displays appropriately.
<input checked="" type="checkbox"/>	▼ Path	
<input checked="" type="checkbox"/>	Path alias functionality	Add, edit, delete, and change alias and verify its consistency in the database.
<input checked="" type="checkbox"/>	Path aliases with translated nodes	Confirm that paths work with translated nodes
<input checked="" type="checkbox"/>	▼ PHP	
<input checked="" type="checkbox"/>	PHP filter functionality	Make sure that PHP filter properly evaluates PHP code when enabled.
<input checked="" type="checkbox"/>	PHP filter access check	Make sure that users who don't have access to the PHP filter can't see it.
<input checked="" type="checkbox"/>	▼ Poll	
<input checked="" type="checkbox"/>	Poll create	Adds "more choices", previews and creates a poll.
<input checked="" type="checkbox"/>	Poll vote	Vote on a poll
<input checked="" type="checkbox"/>	Block availability	Check if the most recent poll block is available.
<input checked="" type="checkbox"/>	Poll add choice	Submits a POST request for an additional poll choice.
<input checked="" type="checkbox"/>	▼ Profile	
<input checked="" type="checkbox"/>	Test single fields	Testing profile module with add/edit/delete textfield, textarea, list, checkbox, and url fields into profile page
<input checked="" type="checkbox"/>	Test select field	Testing profile module with add/edit/delete a select field
<input checked="" type="checkbox"/>	Test date field	Testing profile module with add/edit/delete a date field
<input checked="" type="checkbox"/>	Test field weights	Testing profile modules weighting of fields
<input checked="" type="checkbox"/>	Autocompletion	Test profile fields with autocompletion.
<input checked="" type="checkbox"/>	Block availability	Check if the author-information block is available.
<input checked="" type="checkbox"/>	▼ Search	

	Search engine queries	Indexes content and queries it.
	Bike shed	Tests the bike shed text on the no results page.
	Advanced search form	Indexes content and tests the advanced search form.
	Search engine ranking	Indexes content and tests ranking factors.
	Block availability	Check if the search form block is available.
	▼ Session	
	Session tests	Drupal session handling tests.
	▼ SimpleTest	
	SimpleTest functionality	Test SimpleTest's web interface: check that the intended tests were run and ensure that test reports display the intended results. Also test SimpleTest's internal browser and API's both explicitly and implicitly.
	SimpleTest error collector	Performs tests on the Simpletest error and exception collector.
	▼ Statistics	
	Top visitor blocking	Tests blocking of IP addresses via the top visitors report.
	▼ Syslog	
	Syslog functionality	Test syslog settings.
	▼ System	
	Unicode handling	Tests Drupal Unicode handling.
	Registry parse file test	Parse a simple file and check that its resources are saved to the database.
	Registry parse files test	Read two a simple files from disc, and check that their resources are saved to the database.
	Graph	Graph handling unit tests.
	Actions configuration	Tests complex actions configuration by adding, editing, and deleting a complex action.
	Size parsing test	Parse a predefined amount of bytes and compare the output with the expected value.
	Drupal tags handling	Performs tests on Drupal's handling of tags, both explosion and implosion tactics used.
	Cascading stylesheets	Tests adding various cascading stylesheets to the page.
	Drupal HTTP request	Performs tests on Drupal's HTTP request mechanism.
	Drupal set/get content	Performs tests on setting and retrieving content from theme regions.
	JavaScript	Tests the JavaScript system.

	Drupal error handlers	Performs tests on the Drupal error and exception handler.
	Valid Url	Performs tests on Drupal's valid url function.
	IP address blocking	Test IP address blocking.
	Cron run	Test cron run.
	Admin overview	Confirm that the admin overview page appears as expected.
	Fingerprinting meta tag	Confirm that the fingerprinting meta tag appears as expected.
	403 functionality	Tests page access denied functionality, including custom 403 pages.
	404 functionality	Tests page not found functionality, including custom 404 pages.
	Date and time	Configure date and time settings. Test date formatting and time zone handling, including daylight saving time.
	HTML in page titles	Tests correct handling or conversion by drupal_set_title() and drupal_get_title().
	Front page	Tests front page functionality and administration.
	Block functionality	Configure and move powered-by block.
	System setting forms	Tests correctness of system_settings_form() processing.
	▼ Taxonomy	
	Taxonomy term hooks	Hooks for taxonomy term load/save/delete.
	Taxonomy vocabulary interface	Test the taxonomy vocabulary interface.
	Taxonomy vocabularies	Test loading, saving and deleting vocabularies.
	Taxonomy term functions and forms.	Test load, save and delete for taxonomy terms.
	Taxonomy term multiple loading	Test the loading of multiple taxonomy terms at once
	▼ Tracker	
	Tracker	Create nodes and check for their display in the tracker listings.
	▼ Translation	
	Translation functionality	Create a page with translation, modify the page outdated translation, and update translation.
	▼ Trigger	
	Trigger content (node) actions	Perform various tests with content actions.
	▼ Upload	
	Upload	Check content uploaded to nodes.

	functionality	
	▼ User	
	User registration	Registers a user, fails login, resets password, successfully logs in with the one time password, changes password, logs out, successfully logs in with the new password, visits profile page.
	Username/e-mail validation	Verify that username/email validity checks behave as designed.
	Cancel account	Ensure that account cancellation methods work as expected.
	Upload user picture	Assure that dimension check, extension check and image scaling work as designed.
	Role permissions	Verify that role permissions can be added and removed via the permissions page.
	User administration	Test user administration page functionality.
	User time zones	Set a user time zone and verify that dates are displayed in local time.
	User autocompletion	Test user autocompletion functionality.
	User blocks	Test user blocks.
	▼ XML-RPC	
	XML-RPC validator	See the xmlrpc validator1 specification .
	XML-RPC message	Test large messages.
<input type="button" value="Run tests"/>		

Clean test environment

Remove tables with the prefix "simpletest" and temporary directories that are left over from tests that crashed. This is intended for developers when creating tests.
