

Hook	Implementation In Core
A hook_access (\$op, \$node, \$account) Define access restrictions.	modules/poll/poll.module
B hook_block (\$op = 'list', \$delta = 0, \$edit = array()) Declare a block or set of blocks.	modules/comment/comment.module
hook_boot () Perform setup tasks. See also, hook_init.	N/A
C hook_comment (\$a1, \$op) Act on comments.	modules/user/user.module
hook_cron () Perform periodic actions.	modules/search/search.module
D hook_db_rewrite_sql (\$query, \$primary_table, \$primary_field, \$args) Rewrite database queries, usually for access control.	modules/node/node.module
hook_delete (&\$node) Respond to node deletion.	modules/poll/poll.module
hook_disable () Perform necessary actions before module is disabled.	N/A
E hook_elements () Allows modules to declare their own form element types and specify their default values.	modules/system/system.module
hook_enable () Perform necessary actions after module is enabled.	modules/menu/menu.module
hook_exit (\$destination = NULL) Perform cleanup tasks.	modules/statistics/statistics.module
F hook_file_download (\$file) Allow file downloads.	modules/user/user.module
hook_filter (\$op, \$delta = 0, \$format = -1, \$text = '') Define content filters.	modules/filter/filter.module
hook_filter_tips (\$delta, \$format, \$long = false) Provide tips for using filters.	modules/filter/filter.module
hook_footer (\$main = 0) Insert closing HTML.	N/A
hook_form (&\$node, &\$param) Display a node editing form.	modules/search/search.module
hook_forms () Map form_ids to builder functions.	modules/search/search.module
hook_form_alter (&\$form, \$form_state, \$form_id) Perform alterations before a form is rendered.	modules/locale/locale.module
H hook_help (\$path, \$arg) Provide online user help.	modules/openid/openid.module,
I hook_init () Perform setup tasks. See also, hook_boot.	modules/forum/forum.module
hook_insert (\$node) Respond to node insertion.	modules/poll/poll.module
hook_install () Install the current version of the database schema, and any other setup tasks.	N/A
L hook_link (\$type, \$object, \$teaser = FALSE) Define internal Drupal links.	modules/node/node.module
hook_link_alter (&\$links, \$node) Perform alterations before links on a node are rendered. One popular use of this hook is to add/delete links from other modules.	modules/forum/forum.module
hook_load (\$node) Load node-type-specific information.	modules/path/path.module
M hook_mail (\$key, &\$message, \$params) Prepare a message based on parameters. See drupal_mail for more.	modules/update/update.module
hook_mail_alter (&\$message) Alter any aspect of the emails sent by Drupal	N/A
hook_menu () Define menu items and page callbacks.	modules/path/path.module
hook_menu_alter (&\$callbacks) Alter the data being saved to the {menu_router} table after hook_menu is invoked.	modules/upload/upload.module
hook_menu_link_alter (&\$item, \$menu)	modules/forum/forum.module

Alter the data being saved to the {menu_links} table by menu_link_save().

N	hook_nodeapi (&\$node, \$op, \$a3 = NULL, \$a4 = NULL) Act on nodes defined by other modules.	modules/path/path.module
	hook_node_access_records (\$node) Set permissions for a node to be written to the database.	N/A
	hook_node_grants (\$account, \$op) Inform the node access system what permissions the user has.	N/A
	hook_node_info () Define module-provided node types.	modules/poll/poll.module modules/blog/blog.module modules/forum/forum.module modules/node/node.admin.inc
	hook_node_operations () Add mass node operations.	
	hook_node_type (\$op, \$info) Act on node type changes.	modules/taxonomy/taxonomy.module
P	hook_perm () Define user permissions.	modules/search/search.module
	hook_ping (\$name = '', \$url = '') Ping another server.	modules/ping/ping.module
	hook_prepare (&\$node) This is a hook used by node modules. It is called after load but before the node is shown on the add/edit form.	modules/node/node.module
	hook_profile_alter (&\$fields, \$account) Perform alterations profile items before they are rendered. You may omit/add/re-sort/re-categorize, etc.	N/A
R	hook_requirements (\$phase) Check installation requirements and do status reporting.	modules/update/update.module
S	hook_schema () Define the current version of the database schema.	N/A
	hook_search (\$op = 'search', \$keys = null) Define a custom search routine.	modules/user/user.module
	hook_search_item (\$item) Format a search result.	N/A
	hook_search_preprocess (\$text) Preprocess text for the search index.	N/A
	hook_submit (&\$node) This is a hook used by node modules. It is called after validation has succeeded and before insert/update. It is used to for actions which must happen only if the node is to be saved.	modules/node/node.module
T	hook_taxonomy (\$op, \$type, \$array = NULL) Act on taxonomy changes.	modules/forum/forum.module
	hook_theme () Register a module's (or theme's) theme implementations.	modules/search/search.module
U	hook_uninstall () Remove any tables or variables that the module sets.	N/A
	hook_update (\$node) Respond to node updating.	modules/poll/poll.module
	hook_update_index () Update Drupal's full-text index for this module.	modules/node/node.module
	hook_update_N () Perform a single update. For each patch which requires a database change add a new hook_update_N() which will be called by update.php.	N/A
	hook_user (\$op, &\$edit, &\$account, \$category = NULL) Act on user account actions.	modules/dblog/dblog.module
	hook_user_operations () Add mass user operations.	modules/user/user.module
V	hook_validate (\$node) Verify a node editing form.	modules/poll/poll.module
	hook_view (\$node, \$teaser = FALSE, \$page = FALSE) Display a node.	modules/poll/poll.module
W	hook_watchdog (\$log_msg) Log an event message	modules/dblog/dblog.module
X	hook_xmlrpc () Register XML-RPC callbacks.	modules/blogapi/blogapi.module
