Gallery settings

[Install](#)**[General](#)**[Filter](#)[G2Image](#)[Search](#)

The configuration options have been saved.

Status

Overall Status (Installation): [OK]

Gallery2 API version: 7.54 / 1.5

Theme and Display settings

Gallery page theme:

Drupal theme to be used for all gallery pages (gallery/*).

Gallery embedded theme:

Gallery2 theme to be used for embedded gallery.

Default root album:

Default root album to use on gallery pages. If you have a separate album for use with nodes (Filter, G2Image, ...) it can be helpful to move the root album to hide that album from the browseable gallery.

Gallery block settings

Use these settings to determine the number of available blocks.

Warning: If you decrease the number of blocks, always the last block (with the highest ID) will be removed.

Number of blocks:

Select how many blocks should be available.

Gallery menu settings

Parent item:

The maximum depth for an item and all its children is fixed at 9. Some menu items may not be available as parents if selecting them would exceed this limit.

Depth of Gallery albums:

Depth of album hierarchy to include.

Sidebar settings

Move Gallery2 sidebar to Drupal Gallery Navigation block

When selected, the Gallery2 sidebar will be moved into the Drupal "Gallery Navigation" block. This typically allows for a much cleaner embedded gallery and is generally recommended. Note that you will need to enable the Gallery Navigation block.

Move Gallery2 Admin sidebar to Drupal Gallery Navigation block

When selected, the Gallery2 Admin sidebar will be moved into the Drupal "Gallery Navigation" block. This is not normally recommended since the Admin Sitebar is very long and the formatting does not always fit with the rest of the block (but cannot be changed in the current Gallery2 versions).

XML Sitemap settings

Allows the Gallery2 sitemap to be merged with the Drupal one so that only one URL needs to be supplied to search engines. Requires the Drupal XML Sitemap module ([enabled](#)) and the Gallery2 sitemap module ([activated](#)) to be installed/activated.

Enable merge of Gallery2 sitemap with Drupal sitemap

Error logging / Debug settings

Error logging:

- ☒ Watchdog
- ☐ Output to the browser
- ☒ Verbose error messages

Choose where errors are displayed and how detailed they are.

- ☒ Enable bug report assistant

In case of errors the module can automatically assemble useful data (system info and debug traces) to help you with detailed bug reports. Only available to users with 'administer site configuration' permission.

- ☐ Redirect to Gallery search form for invalid paths

Instead of showing a message that the requested Gallery URL does not exist the user is redirected to the search form.

Debug settings

Links to the most relevant Drupal & Gallery2 pages
