Pathauto

General settings

☒ Verbose

Display alias changes (except during bulk updates).

Separator:

Character used to separate words in titles. This will replace any spaces and punctuation characters.

Quotation marks:

☒ Remove

☐ Replace by separator

Maximum alias length:

Maximum length of aliases to generate. 100 is recommended. See [Pathauto help](#) for details.

Maximum component length:

Maximum text length of any component in the alias (e.g., [title]). 100 is recommended. See [Pathauto help](#) for details.

Maximum number of objects to alias in a bulk update:

Maximum number of objects of a given type which should be aliased during a bulk update. The default is 50 and the recommended number depends on the speed of your server. If you bulk updates "time out" or result in a "white screen" then reduce the number.

Update action:

☐ Do nothing, leaving the old alias intact

☐ Create a new alias in addition to the old alias

☒ Create a new alias, replacing the old one

What should pathauto do when updating an existing content item which already has an alias?

☐ Transliterate prior to creating alias

When a pattern includes certain characters (such as those with accents) should Pathauto attempt to transliterate them into the ASCII-96 alphabet? Transliteration is determined by the `i18n-ascii.txt` file in the Pathauto directory. **This option is disabled on your site because you do not have an `i18n-ascii.txt` file in the Pathauto directory.**

Strings to Remove:

a, an, as, at, before, but, by, for, from, is, in, into, like, of, off, on, onto, per, since, the, this, that, to, up, via, with

Words to strip out of the URL alias, separated by commas

Blog path settings

Pattern for blog page paths:

[user]

User's name

[uid]

User's ID

[mail]

User's email address

[reg-date]

User's registration date

[reg-since]

Days since the user registered

[log-date]

User's last login date

[log-since]

Days since the user's last login

[date-in-tz]

The current date in the user's timezone

[account-url]

The URL of the user's profile page.

[account-edit]

The URL the user's account editing page.

☐ Bulk generate aliases for blogs that are not aliased

Generate aliases for all existing blog pages which do not already have aliases. Note: Bulk Update may not complete on large or slow sites. See the README.txt for more information.

☐ Create feed aliases

Also generate aliases for RSS feeds.

Node path settings

Default path pattern (applies to all node types with blank patterns below):

Pattern for all Blog paths:

Pattern for all Image paths:

Pattern for all Newsletter paths:

Pattern for all Links paths:

Pattern for all Video paths:

Pattern for all Resources paths:

Pattern for all News paths:

Pattern for all Page paths:

[nid]

Node ID

[type]

Node type

[type-name]

Node type (user-friendly version)

[title]

Node title

[author-uid]

Node author's user id

[author-name]

Node author's user name

[term]

Name of top taxonomy term

[term-id]

ID of top taxonomy term

[vocab]

Name of top term's vocabulary

[vocab-id]

ID of top term's vocabulary

[yyyy]

Node creation year (four digit)

[yy]

Node creation year (two digit)

[month]

Node creation month (full word)

[mon]

Node creation month (abbreviated)

[mm]

Node creation month (two digit, zero padded)

[m]

Node creation month (one or two digit)

[ww]

Category path settings

Default path pattern (applies to all vocabularies with blank patterns below):

[cat]/[vocab]

Pattern for all *News* paths:

Pattern for all *Newsletter* paths:

[cat]

Pattern for all *Podcast* paths:

Pattern for all *Video* paths:

[tid]

The id number of the category.

[vocab]

The vocabulary that the page's first category belongs to.

[cat]

The name of the category.

[catpath]

As [cat], but including its supercategories separated by /.

☐ Bulk generate aliases for categories that are not aliased

Generate aliases for all existing categories which do not already have aliases. Note: Bulk Update may not complete on large or slow sites. See the README.txt for more information.

☒ Create feed aliases

Also generate aliases for RSS feeds.

User-tracker path settings

Pattern for user-tracker page paths:

[user]

User's name

[uid]

User's ID

[mail]

User's email address

[reg-date]

User's registration date

[reg-since]

Days since the user registered

[log-date]

User's last login date

[log-since]

Days since the user's last login

[date-in-tz]

The current date in the user's timezone

[account-url]

The URL of the user's profile page.

[account-edit]

The URL the user's account editing page.

☐ Bulk generate aliases for user-tracker paths that are not aliased

Generate aliases for all existing user-tracker pages which do not already have aliases.

☐ Create feed aliases

Also generate aliases for RSS feeds.

[User path settings](#)

Pattern for user account page paths:

[user]

User's name

[uid]

User's ID

[mail]

User's email address

[reg-date]

User's registration date

[reg-since]

Days since the user registered

[log-date]

User's last login date

[log-since]

Days since the user's last login

[date-in-tz]

The current date in the user's timezone

[account-url]

The URL of the user's profile page.

[account-edit]

The URL the user's account editing page.

☐ Bulk generate aliases for users that are not aliased

Generate aliases for all existing user account pages which do not already have aliases. Note: Bulk Update may not complete on large or slow sites. See the README.txt for more information.
