Status report

Here you can find a short overview of your site's parameters as well as any problems detected with your installation. It may be useful to copy and paste this information into support requests filed on drupal.org's support forums and project issue queues.

Drupal	7.8
Access to update.php	Protected
CKEditor	3.6.1
CTools CSS Cache	Exists

Configuration file Not protected

The directory *sites/default* is not protected from modifications and poses a security risk. You must change the directory's permissions to be non-writable. The file *sites/default/settings.php* is not protected from modifications and poses a security risk. You must change the file's permissions to be non-writable.

Cron maintenance tasks Last run 41 sec ago

You can [run cron manually](#).

To run cron from outside the site, go to http://50.57.44.243/milieu3/cron.php?cron_key=2onKlx3yGqlY6le_cdVnqL1PoabuRvx3Xz6kbaLyuTI

Database system PostgreSQL

Database system version 8.4.8

Database updates Up to date

Date API Missing system date settings

The Date API requires that you set up the [site first day of week settings](#) to function correctly. The timezone has been set to [Asia/Almaty](#). The medium date format has been set to [D, m/d/Y - H:i](#).

Drupal core update status [No available releases found](#)

There was a problem checking [available updates](#) for Drupal. See the [available updates](#) page for more information and to install your missing updates.

File system	Writable (<i>public</i> download method)
GD library PNG support	2.0
GD library rotate and desaturate effects	2.0
Hierarchical Select	All updates installed. HS API implementation modules correctly installed.

Module and theme update status [Out of date](#)

There are updates available for one or more of your modules or themes. To ensure the proper functioning of your site, you should update as soon as possible. See the [available updates](#) page for more information and to install your missing updates.

Node Access Permissions 40 permissions in use

If the site is experiencing problems with permissions to content, you may have to rebuild the permissions cache. Rebuilding will remove all privileges to content and replace them with permissions based on the current modules and settings. Rebuilding may take some time if there is a lot of content or complex permission settings. After rebuilding has completed, content will automatically use the new permissions. [Rebuild permissions](#)

Notifications status Enabled. 0 queued. Last: never

There are 0 notification events in queue. No successful notifications have been sent. View full [notifications logs](#).

PHP 5.3.5-1ubuntu7 ([more information](#))

PHP extensions Enabled

PHP memory limit 128M

PHP register globals Disabled

Unicode library PHP Mbstring Extension

Update notifications Enabled

Upload progress Not enabled

Your server is capable of displaying file upload progress, but does not have the required libraries. It is recommended to install the [PECL uploadprogress library](#) (preferred) or to install [APC](#).

Web server Apache/2.2.17 (Ubuntu)
