## XML sitemap

**Sitemap**

Search engines

Tools

The sitemap is located at <http://dev.healingthresholds.net/sitemap.xml>.

[\[more help...\]](#)

### Settings

Add all the links to the default language sitemap

This option will be used only when the language negotiation uses a path prefix mechanism.

**Cron limit:**

The number of links that are updated in each pass of a [cron maintenance task](#).

**Cache directory:**

The directory where the cache files are created; change it only if you are having problems with the default setting.

Use stylesheet

Specify a xml stylesheet for the sitemap?

### Front page

**Front page change frequency:**

The change frequency associated with the front page.

**Front page priority:**

The absolute priority for the front page.

### Node settings

The settings for the nodes to include in the sitemap.

**Promotion priority adjustment:**

This number will be added to the priority of each post that is promoted to the front page. This setting doesn't apply for the nodes for which the priority is overridden.

**Comment ratio priority adjustment:**

This number will be added to the priority of the post with the highest number of comments; for the other posts, the number is calculated proportionally to the number of comments. This doesn't apply if the maximum number of comments is one, nor for the nodes for which the priority is overridden.
