[Backup File](#)

Backup file name

THCT_Nightly_Backup

[Replacement patterns](#)

Append a timestamp.

Timestamp format

Y-m-d\TH-i-s

Compression

GZip

File Encryption

Install the [AES Encryption Module](#) to enable backup file encryption.

[Default Database Backup Options](#)

You may omit specific tables, or specific table data from the backup file. Only omit data that you know you will not need such as cache data, or tables from other applications. Excluding tables can break your Drupal install, so **do not change these settings unless you know what you're doing.**

Exclude the following tables altogether

actions
authmap
backup_migrate_destinations
backup_migrate_profiles

[View as checkboxes](#)

Exclude the data from the following tables

actions
authmap
backup_migrate_destinations
backup_migrate_profiles

[View as checkboxes](#)

Lock tables during backup

Use mysqldump command
